Art Unit 1713

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 29 and 49 are rejected under 35 U.S.C. § 102(b) as being anticipated by Weaver et al., U.S. Patent 4,532,052.

Reference to Weaver et al. specifically teaches the use of claimed polymers in well treatment with cross-linking being done by a multiple potential group of ionic cross-linking. As can be seen in column 11, in the formula as stipulated with monomers A, B, C, the hydrophobically modified hydrophilic polymers are the same as those being claimed by applicants even though the terminology of the reference refers to branching for the hydrophilic properties. It is clear from the formula discussed above that the hydrophilic entities are part of the backbone and the hydrophobic entities are pendant thereon "modifying" the polymers. The specific cross-linking is discussed in column 14 and the chromium is specifically mentioned as a possibility. The claims are, therefore, anticipated by reference to Weaver et al.

Art Unit 1713

2. Claim 36 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art teaches the hydrophobically modified polyacrylamides of applicants' claim. The prior art teaches the use of these polymers for subterranean well treatments. The prior art, however, is silent as to the cross-linking of these polymers subsequent to their introduction into the wells. This claim, therefore, represents allowable subject matter.
